Coastal Analysis June 24

Summary

Confounding Variables

- 1. Population Density. Reflects the role of social distance in airborne propagation. We should in all our comparisons keep this variable as fixed as we can while avoiding the comparison of small sets of data.
- 2. All Ages in Poverty (%). Reflects propensity to respect hygiene (notably mask adoption) and social distance rules (living circumstances and ability to stay-at-home).
- 3. Median Income. Similar to (2) while an independent variable (poverty rate may be high and median income high or low dependent on the wealth gap).
- 4. Percent adult obesity. Reflects propensity to generate respiratory droplets and observed correlation with COVID infection/symptom severity.
- 5. Voter margin 2020 election. Reflects propensity to wear masks. Independent variable to (7).
- 6. Median age 2019. Reflects propensity to generate respiratory droplets and observed correlation with COVID infection/symptom severity.
- 7. Voting party in the 2020 presidential election. See (5).
- 8. Air pollution (PM 2.5) (Dominici lab data). Reflects propensity to generate respiratory droplets and observed correlation with COVID infection/symptom severity. Should use 2020 PM 2.5 data if available given the importance of the fire season in 2020.
- 9. Mean winter and summer humidity (Dominici lab data). Reflects propensity to generate respiratory droplets and observed correlation with COVID infection/symptom severity.

Analyses

- Atlantic coastal counties (bordering the ocean, ie 1st degree) versus Inland Counties (including all counties bordering non-ocean bodies of water).
- Atlantic urban coastal counties (bordering the ocean, ie 1st degree) versus Inland urban Counties (including all counties bordering non-ocean bodies of water).
- Atlantic rural coastal counties (bordering the ocean, ie 1st degree) versus Inland rural Counties (including all counties bordering non-ocean bodies of water).
- Pacific coastal counties (bordering the ocean, ie 1st degree) versus Inland Counties (including all counties bordering non-ocean bodies of water).
- Pacific urban coastal counties (bordering the ocean, ie 1st degree) versus Inland urban Counties (including all counties bordering non-ocean bodies of water).
- Pacific rural coastal counties (bordering the ocean, ie 1st degree) versus Inland rural Counties (including all counties bordering non-ocean bodies of water).

- Gulf coastal counties (bordering the ocean, ie 1st degree) versus Inland Counties (including all counties bordering non-ocean bodies of water).
- Gulf urban coastal counties (bordering the ocean, ie 1st degree) versus Inland urban Counties (including all counties bordering non-ocean bodies of water).
- Gulf rural coastal counties (bordering the ocean, ie 1st degree) versus Inland rural Counties (including all counties bordering non-ocean bodies of water).
